<b>SYNOPSIS:</b>	<p>Saint Paul Fire Department was dispatched for a report of a dwelling fire. Fire companies arrived to find a small fire in the floor of an attached front porch. Firefighters performed extinguishment and overhaul. Interviews conducted on scene with the occupants revealed smoking had taken place in the area approximately "3-5 minutes prior" to the incident and a cigarette was disposed of in the area of origin. Investigation revealed no competent ignition sources within the area of origin and several discarded cigarette butts. The ignition source was most likely heat from a cigarette. The first fuel ignited was most likely leaf clutter under the porch. The act that brought these two together was most likely incomplete extinguishment of smoking materials. The classification of fire cause is most likely accidental.</p>
