RE: Jeremiah Hurley
DOB: 2/19/1954

To Whom It May Concern:

I am Mr. Hurley's primary physician and have been for 6 years. Mr. Hurley has multiple medical problems including severe chronic low back pain as well as multiple other joint problems, coronary artery disease, and pulmonary emboli (clots).

Due to these problems Mr. Hurley is unable to sleep flat on a standard bed and therefore spends much of his time in a recliner or mechanical bed. It would be to his physical and mental benefit to be able to continue with his current sleeping and sitting arrangements.

Sincerely,

John Barsanti MD
