

# **Ramsey County Point-in-Time (PIT) Homeless Count, January 2017**

Compiled by Ramsey County Health and Wellness Administration Division on behalf of Heading Home Ramsey

## **Background and Purpose of the PIT**

Each January the federal Housing and Urban Development (HUD) Department mandates an annual count of homelessness in several settings for every Continuum of Care (CoC) in the nation. This count is intended to capture the total number of persons experiencing homelessness on a single night, and is conducted during the last 10 days of every January. Governments at all levels rely on the reported demographic and social characteristics for planning and evaluating the homeless response system for the entire community, not just government funded programs.

Ramsey County, with the assistance of the Institute for Community Alliances (ICA), completed surveys of every emergency shelter and transitional housing program, regardless of funding source, for the night of Thursday, January 26. At the same time community and government partners surveyed as many unsheltered persons feasible over a several day period. For the first time, Ramsey County added to the unsheltered surveys questions about persons temporarily living with family or friends who otherwise would be homeless, commonly known as “doubled up”.

## **Limitations of Counting Homeless Once Per Year**

- Because CoC’s conduct the complete PIT count only once a year, in January, the results are somewhat limited. Seasonal variations likely result in different demographic compositions and demand for facilities, especially considering the extreme variations of Minnesota’s climate.
- Unsheltered and doubled up counts are particularly unreliable, as they are based solely on the coordination of volunteers and outreach workers, locations covered, and the willingness of individuals to respond to sensitive and invasive survey questions.
- The surveys of emergency shelters and transitional housing primarily reflect capacity for serving homeless and not necessarily the demand. Many shelters regularly meet or even exceed capacity, which can be short of the total need.

## **Trends**

Despite these limitations, Ramsey County has tracked shelters, transitional housing, and unsheltered for the past several years revealing trends by age and type of homeless facility.

### *Total Count*

- Not including doubled up population, the total number of homeless persons increased 6.8% from January 2016 to January 2017 (1,346 to 1,438).
- Since 2013 the total number of persons has been mostly flat overall, with an increase in the number of total households since 2014, indicating an increase in the proportion of smaller households or singles included in the count.

### *Age*

- Of the 784 in emergency shelters in 2017, 69% were age 25 and older and over one-fifth, 22% were children under 18.
- The number of persons over age 24 increased from 2016-2017: in ES 500 to 538, unsheltered from 112 to 139, and 169 to 209 in TH.

#### *Unsheltered/Doubled Up*

- The unsheltered count significantly increased by 22% from 2016 to 2017 (136 to 166 persons), due to more participation, training, and identification of locations where they frequently congregate, such as food shelves, public transit, and skyways.
- Of the unsheltered, only four percent were children and 84% over age 24.
- Ramsey County's first survey of doubled-up populations reached 525 persons. Of those, 239 (46%) were under age 18 and 87 (17%) from the ages 18 through 24. However, the full-extent of doubled-up is likely larger given the limitations of surveying the entire county over a few days of the year.

#### *Race*

- African Americans were 48% of total ES population, 64% of TH and 37% of the unsheltered. Whites were about 35% of ES and 24% of TH.
- In contrast, government projections estimate that in 2016 that African Americans were 12% of the county's total population and whites 69%. In other words, African Americans are four times as predominant in emergency shelters compared to the general population.

#### *Sheltered Count (ES/TH)*

- Unlike the time-limited ES facilities, TH programs provide housing and support services for homeless persons for up to two years. From 2014 to 2016 the county experienced a decline from 700 to 449 persons in TH programs with a slight increase to 488 in 2017.
- Similar to ES, the TH counts primarily measure capacity and reflect policy changes in how many can be sheltered. The counts also rise or fall due to some projects changing their service type year-to-year, such from ES into TH or converting from TH to more permanent housing like rapid re-housing.

For more information on the PIT count and homelessness in Ramsey County, please contact the Heading Home Ramsey CoC staff working in Ramsey County Health and Wellness Administration Division:

**Point-in-Time Homeless Summary for 1/26/2017**  
**Ramsey County CoC**

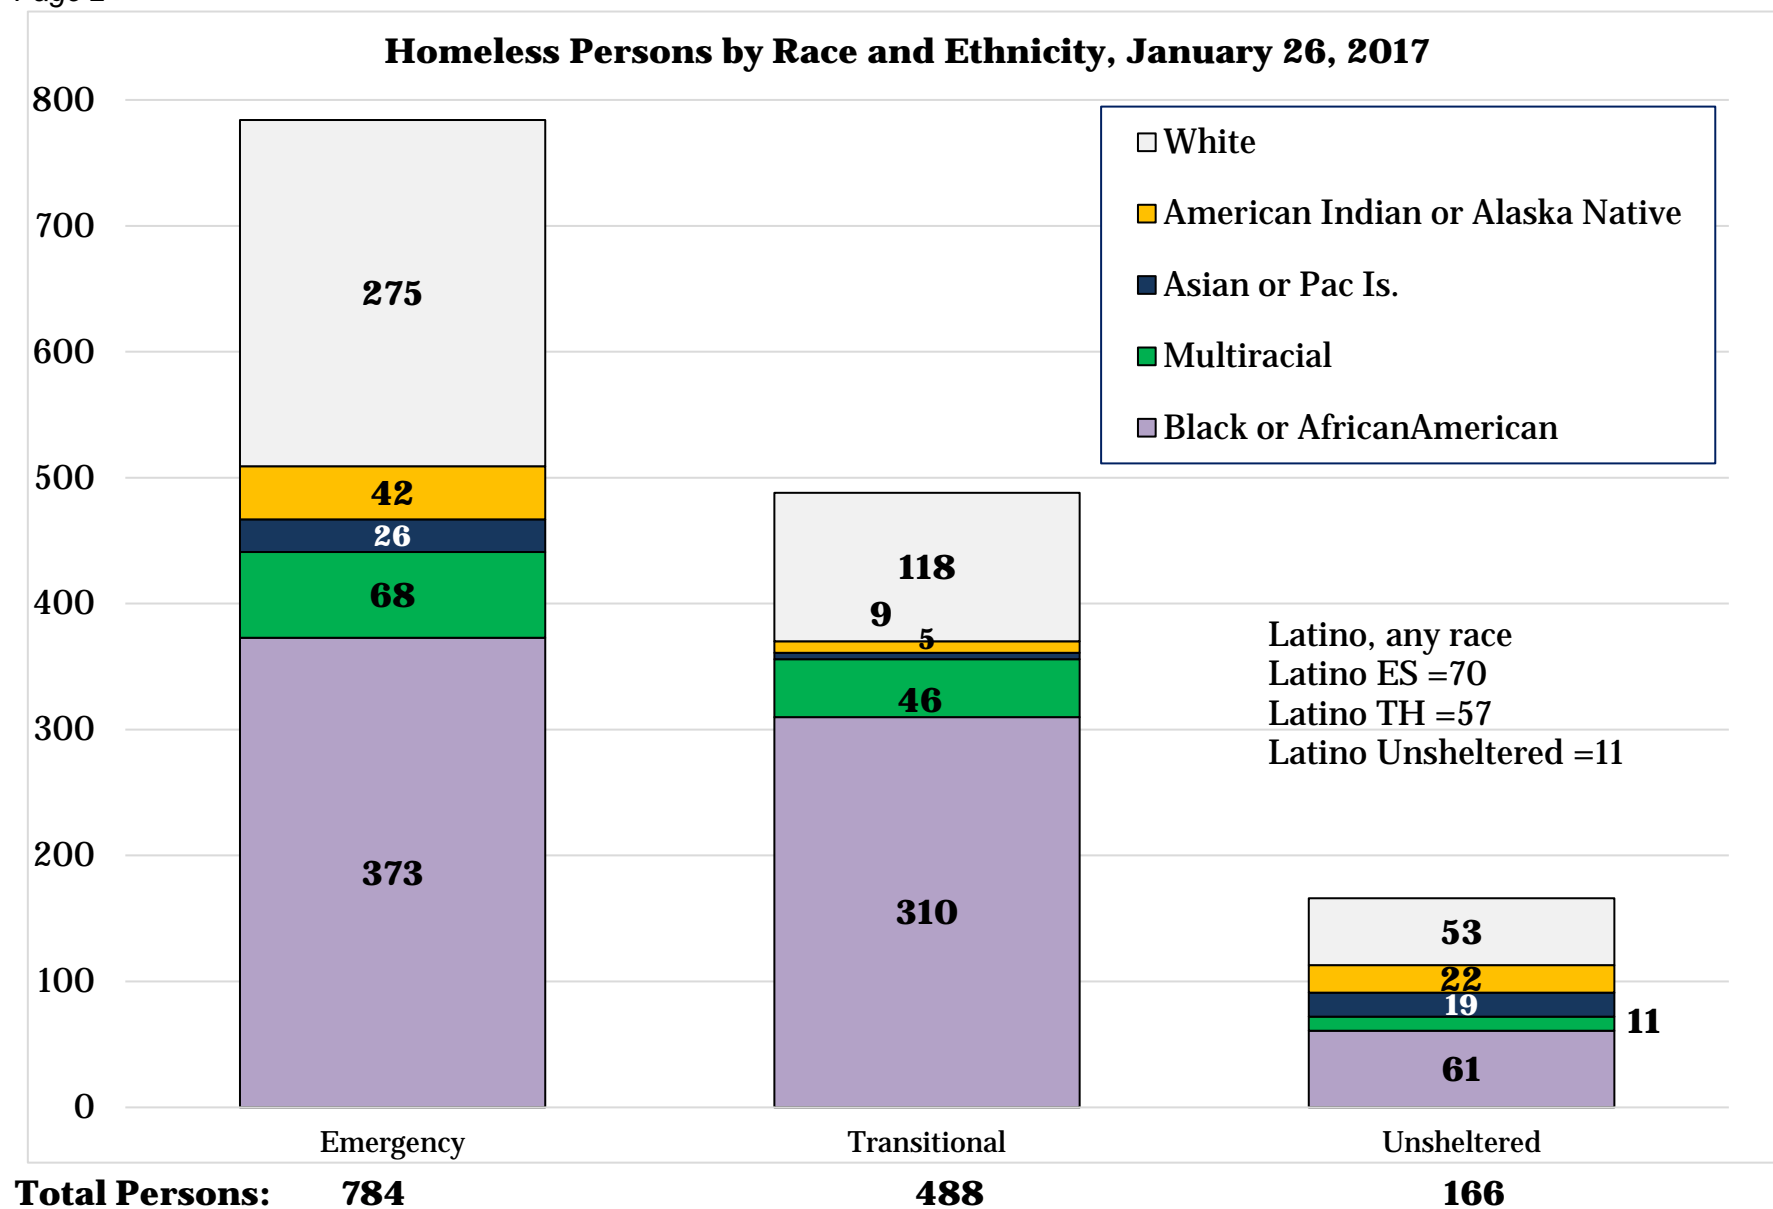

**Total Homeless Persons = 1,963**

*Note: Excludes unsheltered observations*

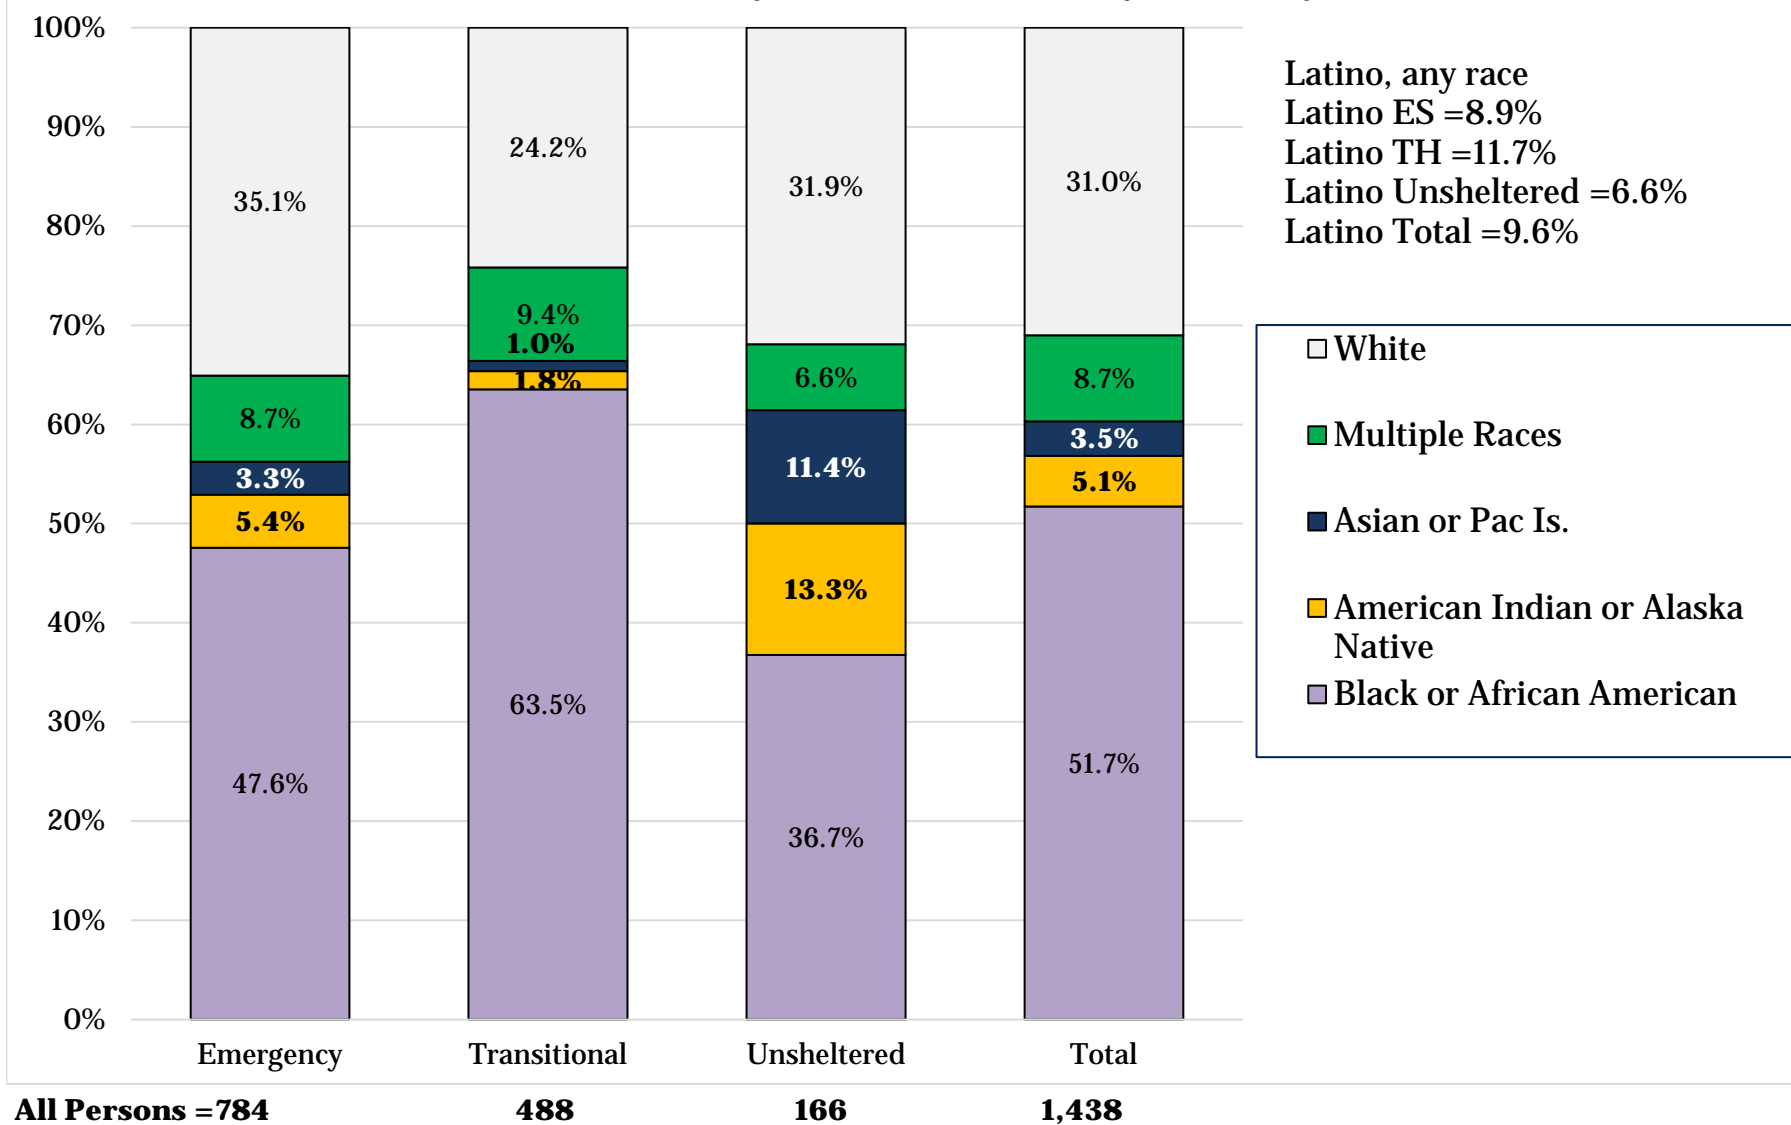

**Ramsey County Homeless Persons by Age, January 26, 2017**

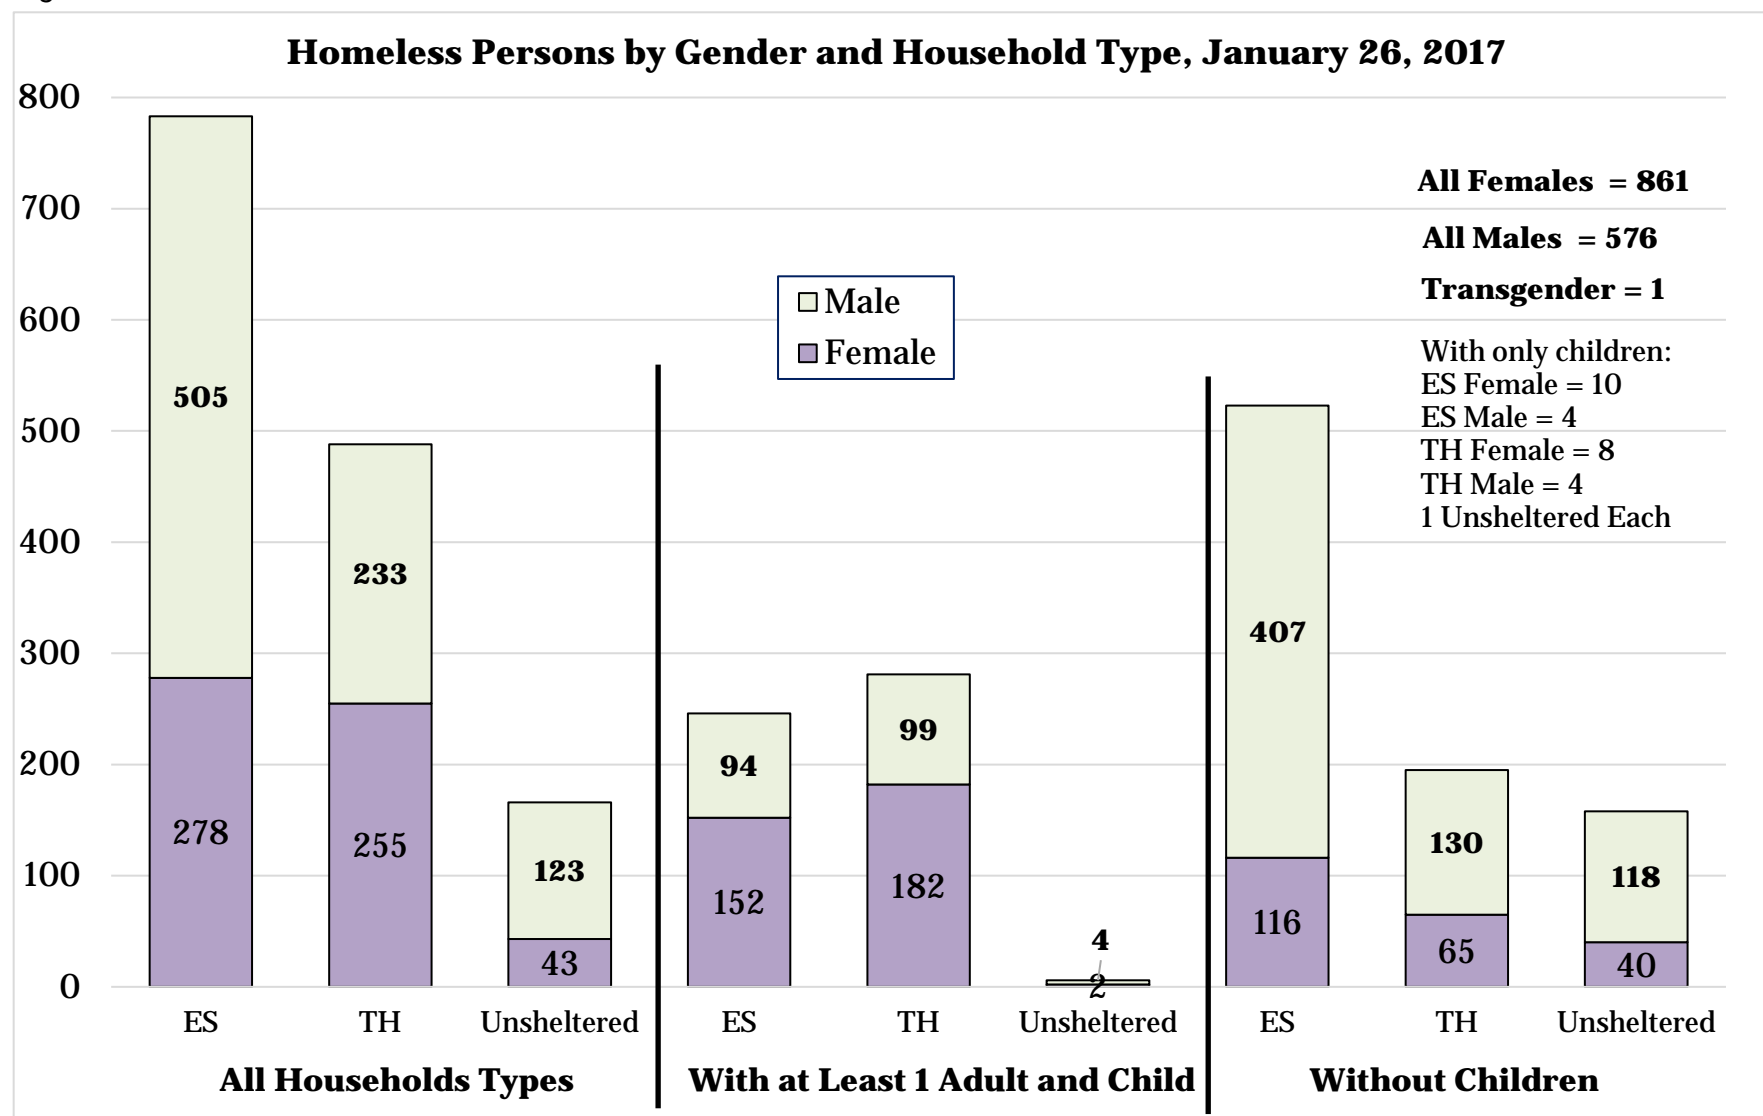

Footnote: Less than two-thirds of doubled-up recorded race. The race composition is generally similar to the total of the rest.

### Percent of Homeless by Race and Ethnicity, January 26, 2017

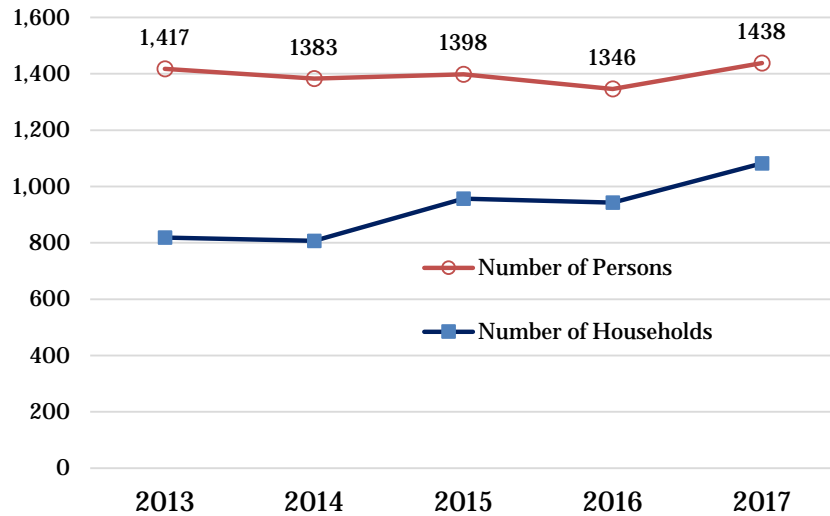

Footnote: Less than two-thirds of doubled-up recorded gender. The recorded gender composition for doubled-up was about 70% female.

## Point in Time Summary 2013-2017 for Ramsey County CoC, revised 5/23/2017
