Guaranteed Insects

Year Round Pest Barriers

The first treatment around your home is what is called an 'initial flush out'. This special treatment attempts to gain control over existing pest populations. **Your first regular treatment should follow within 30-45 days of the initial treatment to help break up egg cycles.** Insects are immune to treatments while in their egg shells and our products must be active to catch pests as they hatch.

Initially you may see a slight increase in pest activity as pest populations are disrupted. Within a few weeks you should see this activity drastically decline as our products take effect. Over time, these pest levels will continually decrease as regular services are performed. Regular treatments are critical in maintaining protective barriers and preventing infestations from reoccurring. If you see more than the occasional pest around your home, please call (651) 735-3101 at any time for a complimentary retreat!
