Hi Nicole,

Attached are the necessary forms for appealing the egress window requirements. On the application where it says "what is being appealed and why?" you should check the "other" box and write in "egress window requirements" and explain that the window was installed at the wrong height. On the second form you will need to provide the measurements of your windows opening size, total glass square footage and the height the sill is from the floor. You will also need to provide the difference between your window and the requirements. For example if your opening width is 26" and the requirement is 20" you should put the difference as + 6" because you exceed the requirement by 6". For the "height of opening to finished floor" you will have a negative number. You can leave the recommendation part blank.

I'm sure you are already well aware of the requirements but here they are anyway. The minimum opening width is 20". The minimum opening height is 24". The minimum square footage is 5 square feet. The maximum sill height is 44"

Please let me know if you have any questions about filling out the forms. Hopefully we can get this resolved and final your permit.

Thank you,

Dori Dufresne

Hi again Nicole,

I also wanted to mention to you that the building permit you have only covers the egress window. An additional building permit is required for framing, sheetrocking, etc. to finish the space. A basic floor plan of the basement will be needed for that permit. I see that you already have the electrical, mechanical and warm air permits so you are good there. Again, let me know if you have any questions.

Thank you,

Dori Dufresne
