

Pool saver seals out leaves and dirt

The best way to keep your pool clean is to keep it covered.

Because POOLSAVER is so simple to put on, you can keep your pool covered whenever your pool isn't actually in use.

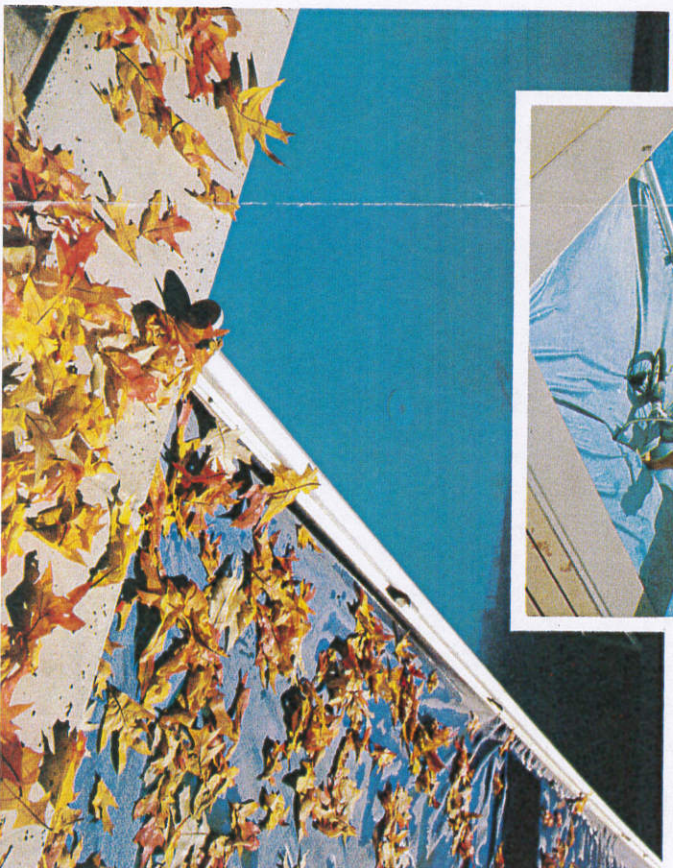

Pool saver's patented tracks and cover form a tight, effective seal over the pool. You spend less time sweeping, skimming and vacuuming — more time enjoying your pool.

Our child saver could be the life saver

Most of all drownings occur in swimming pools with the victims being under the age of 5.

Pool saver's reinforced vinyl cover is so simple to put on, even several adults can help on it. Children and pets are kept out, and you have peace of mind. Your pool must be left un-

On when it should be on

Because the POOLSAVER is so easy to use, the POOLSAVER will be on your pool whenever your pool is not actually in use. You'll have peace of mind knowing that your pool is safe, and that dirt and debris are kept out, heat and chemicals are kept in.

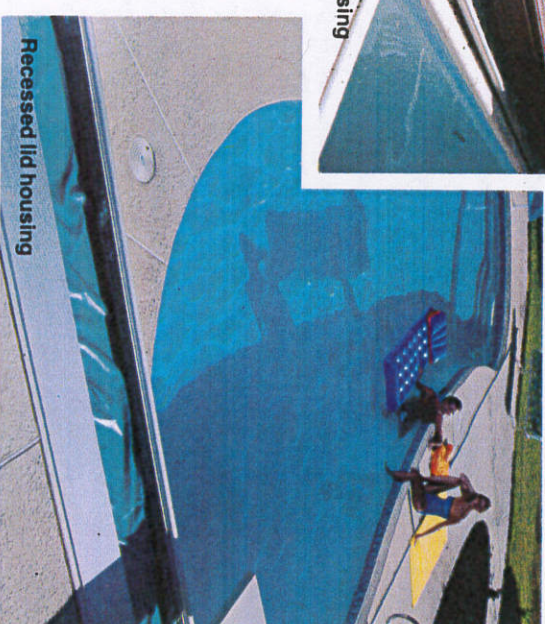

Recessed lid housing

Redwood bench housing

Gone when it should be gone

When you want to enjoy your pool, POOLSAVER's cover retracts into its own hidden housing. This housing can be recessed flush with the deck and covered by an attractive aluminum lid; or, mounted directly on the deck encased in a handsome and functional redwood bench. Either way, your POOLSAVER is stored out of sight, ready for immediate use.

Track Types

The POOLSAVER's cover fabric slides out on inconspicuous, patented tracks to form a tight seal over your pool. Several track types are available. For total concealment of the tracks, your pool should be built to accommodate the POOLSAVER.

Under Tracks

Under tracks can only be installed on purely rectangular pools designed to accommodate them. Because total track concealment is obtained, we recommend the Under Track. The perfect track for your pool.

Recessed Track
This track is recessed flush with the top of the deck, and can be used on irregular shaped pools built to accommodate this track.

Universal Track

On existing pools and many new pools, we use this low profile "Threshold" track. This track is only 5/8" high at its highest point. It is bolted directly to the deck and runs parallel to the widest point of the pool.
