Re: 1839 St Anthony Ave

The City's Animal Control Division performed a fog test to determine if a hole that developed on your property was caused by a defect in your private sewer pipe. The result of the fog test was positive and confirms that there is a break or separation in your sewer pipe that can lead to any of the following:

1. Settlement of the surface of the street, boulevard, or sidewalk that can pose a hazard to the traveling public.
2. Pathway for sewage to enter the ground.
3. Pathway for rain, groundwater, or dirt to enter the public sewer system.
4. Pathway for rodents (rats) to burrow their way to the surface or into the sewer system.

In Saint Paul, property owners are responsible for the installation, maintenance, and repair of their private sewer pipes. Their responsibility extends from the building or property being served to and including its connection to the public sewer main. The Saint Paul Legislative Code requires property owners to repair their defective private sewer pipes and provides remedies in the form of abatement actions for those unwilling to comply.

Please make arrangements to have your sewer pipe repaired by November 19, 2017. If your sewer pipe is not repaired by November 19, 2017, the abatement process will be initiated and all costs incurred will be charged against you.

The Sewer Utility Division has a voluntary assessment program available to Saint Paul property owners to assist with the unexpected cost of sewer repairs. If you are interested in using this program, please see the assessment program packet included with this letter. More information about this program can also be obtained at www.stpaul.gov/sewer.

For any questions regarding your defective sewer pipe, please contact the City of St. Paul Sewer Utility Service Desk at (651) 266-6234. Thank you.

Sincerely,
