Project areas are subject to change.

Customers will be contacted directly
when plans are confirmed.

2024 Projects

- Confirmed (21)
- Tentative (10)

Corrosion Control

To reduce potential leaching, SPRWS treats the water by monitoring and adjusting pH and alkalinity levels.

This process, called **CORROSION CONTROL**, creates a protective scale on the inside of the pipe between the water and the lead service line.

Improved corrosion control methods are being installed and will go into effect in January 2024.

December Project Updates

\$104 M Paid to Contractor
\$235 M Contracted Work

39.4 % Complete

THANK YOU FOR YOUR PARTNERSHIP & SUPPORT
